THE TEXAS PECAN NURSERY Inc.

offers you THIRTY YEARS of continuous experience in growing and producing select stock.

WELL ROOTED PECANS, PEACHES, PEARS, PERSIMMONS, AND OTHER FRUIT TREES
EVERGREENS, NURSERY STOCK, AND ONE HUNDRED VARIETIES OF ROSES

U.S. and TEXAS STATE INSPECTED

A beauty appreciates beauty and quality in our peaches.

This overburdened peach tree is only three years old and is one of the trees in our orchard at right.

Typical three-year-old orchard planned by the Texas Pecan Nursery, bearing peaches, plums, apricots, apples, cherries and figs from April to October, with pecans interplanted for permanent profit.

The culmination of profitable growing fruit for market.

An abundant yield of luscious peaches profitably marketed makes this grower happy.

One of our three-year-old plum trees lucratively loaded with fruit.

Well rooted Pecans properly planted and cultivated produce profitably.

R.W. Fair, Founder, and W.D. Henson, former U.P. of the Texas Pecan Nursery counted 304 pecans on this tree three years after transplanting (LEAVES PURPOSELY STRIPPED FOR PHOTOGRAPH)

Roses, Yapon Holly, Box Plant, Cherry Laurels, Azaleas, Russian Honey Suckle, blend beauty and color.

Garden scene at the home of Senator Tomas G. Pollard, Tyler, Texas. Pecan trees shade, beautify and bear.

A high hedge of Arborvitae lends privacy to the interesting beauty of this formal garden.

Red pink and white flowering peaches enhance the beauty of gardens in early Spring.

Hundreds of peach trees on terraces, acres of roses on tilled land produce fruit for Spring and Summer and furnish rose bushes for winter planting.

Pecans, Peaches, all Kind Trees—Nursery Stock—Roses
Texas Pecan Nursery, Inc., Tyler, Texas

ALL THE STOCK WE SELL IS FULLY GUARANTEED

PEARS

Six Dependable Varieties

LECONTE—Large; pyriform; smooth; pale yellow. Quality good when properly ripened. Ripens July 20th to end of August. Begins to bear when five years old.

DOUGLAS—Fruit large, slightly oblong in shape; creamy-white with red cheek. Tree is vigorous grower, with up-right branches and large, glossy leaves. A very heavy producer. This is one of the best pears. Ripens in August.

BARTLETT—Everyone is acquainted with this large yellow pear. Fruit very rich and highly aromatic—that's why this pear can always be sold when others are refused. Tree grows dense and of even, conical shape. Ripens in August.

CHINESE SAND—Called "Pineapple Pear." Valuable for the South for canning. Flesh coarse, about the quality of Kieffer. Tree good grower, not subject to blight; good bearer. Ripens in August. Best suited to that section within 100 to 150 miles of the Gulf Coast.

GARBER—Oriental strain, like the Smith's Fruit; resembles Kieffer in size, shape and color. Ripens in late September.

KIEFFER—Best variety for the Southwest; large; yellow with rusty cheek; fine for cooking and market. Ripens in October.

PLUMS SUITED TO THE SOUTHWEST

SIX WEEKS—Earliest of all plums. Large; oblong; bright red; flesh, pink; seed, small; upright; vigorous; prolific. Ripens May 20th to June 1st.

METILLEY—Handsome tree; fruit, large; golden red. Quality fine. Good bearer. Ripens May 25th.

BRUCE—Large, red. Very productive; well suited for North Texas, the Panhandle, and Oklahoma. Ripens June 1st.

RED JUNE—Skin, purplish-red; flesh, yellow; solid, somewhat coarse-grained; juicy, sub-acid; good quality, clingstone. Ripens about June 5th to 15th, and is the earliest large-fruited market variety.

AMERICA—Successful plum anywhere. Bears very young, and enormous crops. This wonderful plum should be in every orchard. Where there is no orchard, there should be a few trees. It is as beautiful as a plum can possibly be—golden yellow with red cheek. Ripens about June 15th.

GOLD—Nearly transparent; golden yellow; wide range; sure bearer. Ripens last of June.

BURBANK—Extremely popular in all sections. Richly colored, red mottled, dotted with yellow. Heavy bearer. Ripens in July.

DAMSON—The old-fashioned blue Damson, known for the fine jelly and preserves it makes. Ripens in late summer.

PLUM-CHERRIES . . . Sometimes called Dwarf Cherry

COMPASS—Cross between plum and cherry. Vigorous grower; prolific; hardy; bears early. Fruit dark red, rather small. Ripens in June. Should not be picked until ripe.

SEVEN SPLENDID APPLES

ity good; crisp; sub-acid; very fragrant. Excellent cooker. Fruit tender, requires careful handling. Trees bear young; rather dwarfish growth. An extremely hardy variety. Ripens in June.

WINESAP—One of the oldest American apples, still increasing in favor. Its size, color, and, particularly, its quality, have given it the well deserved popularity it enjoys. Medium size; vivid red; highly satisfying flavor. One of the best keepers of all apples. All-purpose apple, and a good one. Ripens in September.

YELLOW DELICIOUS—Beautiful golden yellow skin, and fine, firm-textured flesh. The tree is thrifty and extremely productive, yielding bountiful crops while very young. Tree is not of the large growing type. Ripens in early October.

GRIMES GOLDEN—Good, golden yellow apple; an old favorite over the United States on account of beauty and size. Tree very productive, long-lived; splendid for commercial planting and home orchards. Ripens in early fall.

DELICIOUS—Beautiful, red-striped winter apple. Good quality; fine flavor. One of the best known and best liked apples. Every home should have a few. Ripens in November.

Four Fine Figs

TEXAS EVERBEARING—A wonderful new fig—one that you should, by all means, include in your planting. Bears young, often the first year after planting. Prolific and good grower. Under favorable conditions will ripen fruit continually from about May 1st until frost. Fruit medium to large, dark brown; particularly sweet.

MAGNOLIA—Fruit very large, sweet and rich; ripens in June until frost. Should bear first year.

BROWN TURKEY—Large; brownish-purple; fruit very sweet; harder than Magnolia; begins to ripen last of June.

CELESTIAL—Medium size; blue fruit; very sweet and hardy. Ripens in July.

Our Well Rooted Pecan Trees Grow Better—Produce Quicker -

WESTERN VARIETIES

THESE VARIETIES LIVE AND PRODUCE IN THE HIGHER ALTITUDES AND DRIER CLIMATES

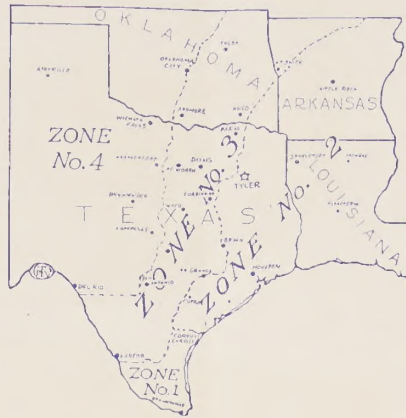

BURCKETT

Originated at Clyde, Texas; one of the best of the Western list. It is also doing well on high ground in East Texas. Medium to large size, fills well, good flavor, and prolific. 55 per cent meat.

WESTERN SCHLEY

Very similar to Eastern Schley, except that it thrives better in the drier climate and higher altitudes of the West. A very fine nut for the West. 60 per cent meat.

HOW TO SELECT THE PECAN VARIETIES BEST SUITED TO YOUR SOIL AND CLIMATE

Zone No. 1—Not recommended for commercial planting. We recommend for home planting in east part: Stuart, Success, Moore, Money Maker; in west part: Burkett, Success, Schley.

Zone No. 2—Only the Eastern Varieties recommended: Success, Moore, Schley, Delmas, Money Maker, Stuart. We would add Burkett for hill land in the west central part. Success, Moore, Money Maker, Schley, and Stuart should be used for bottom lands. Plant Delmas on upland. Stuart seems to be especially adapted to extreme east part of this section and bottom lands in the western part. These are known as tested Eastern Varieties.

Zone No. 3—Both Eastern and Western varieties recommended—Western Varieties for west part and uplands; Eastern Varieties in east part and lowlands. Burkett, Western Schley, Texas Prolific, and Halbert are tested Western Varieties.

Zone No. 4—Plant Western Varieties only. Other States—Continue zone lines northeast about 100 to 125 miles, planting Eastern Varieties in the lower altitudes and river bottoms of Zone 3, and the Western Varieties on the uplands and in the higher altitudes of Zone 3. Plant Western Varieties on all lands west of dividing line between zones 3 and 4.

ROSE BUSHES

Many Standard or Well Known Varieties

We guarantee to furnish good plants, and all orders are shipped subject to approval upon arrival. We cannot guarantee all plants to live and grow, however.

CHARLES K. DOUGLAS—HT. Fine, long pointed buds, opening to large flowers of striking crimson-scarlet; slightly fragrant. The strong, branching plants make a striking garden picture. Abundant, healthy foliage.

E. G. HILL—HT. Very beautiful, dark red buds which open to immense, long-lasting, dazzling scarlet flowers, with the fragrance of the old-time roses. For a rose so full, the plant is unusually prolific and makes better than average garden growth.

ETOILE DE HOLLANDE—HT. Brilliant red blooms of magnificent size, perfect in half-open state; attractive centers when full blown; enormous petals; fragrant. Healthy. Free flowering.

RED RADIANCE—HT. Big, globular blooms of deep rose-red on strong canes. The plant blooms freely until frost. Foliage excellent.

FRANCIS SCOTT KEY—HT. Very large, light crimson buds and massive, very double (ninety-five petals) blooms of the noblest form. Slightly fragrant. Erect. Flowers in great abundance. Has good foliage and is quite hardy. It does extra well in the South.

EDITH NELLIE PERKINS—PH. The open bloom is a delightfully shaped flower of two contrasting tints, the outside of the petals gleaming with bright orange-cerise and the inside overspread with pale salmon-pink flushed with orange-gold. The plant stands up vigorously, lending itself to formal bedding use, as well as providing an abundance of exquisite blooms for cut flowers.

RADIANCE—HT. Brilliant rose-pink buds, opening to well-formed, shining, globular flowers, with lighter tints on reverse of petals; very fragrant. Plant of splendid growth; wonder bloomer.

ROSLYN—HT. Charming, pointed buds of golden yellow and frilled, open flowers of buttercup hue strengthened with orange. A remarkably free bloomer.

ETOILE DE FRANCE—HT. One of the really fine old-fashioned, clear crimson Hybrid Teas, with large double, star-shaped flowers, borne singly on long stems. Bushy bedding variety.

MARY, COUNTESS OF ILCHESTER—HT. Large double, full, cupped blooms of deep rose-pink; fragrant. Plant bushy; blooms freely; very hardy. Fifty-two petals.

EDITOR McFARLAND—HT. A deep, sparkling pink rose of the Lady Astor type; borne with liberality by vigorous, upright bushes which hold the flowers stiffly erect and make them particularly suitable for cutting. The Editor McFarland is the best pink rose for the South.

MARGARET MCGREDDY—HT. It is almost impossible to describe the extraordinary vividness of this scarlet-orange or brick-red flower. Its sturdy growth, delightful perfume, and remarkable blend of colors, is everything that could be desired. We recommend it for mass planting.

BETTY UPRICHAR—HT. Copper-red buds, opening to semi-double, large flowers of brilliant orange-carmine on the outside of the petals, showing light salmon ridges. The Betty Uprichard possesses a very spicy fragrance.

LADY HILLINGDON—T. Slender, pointed buds and elegantly cupped flowers of deep saffron-pink, paling lighter toward edges of petals; fragrant; erect; perfect foliage. Needs some shade in hot weather. Free flowering.

LUXEMBOURG—HT. Yellow, shading to copper at center. Stiff, upright stems, producing large, flowers especially valuable for cutting.

AMI QUINARD—HT. Dark yet brilliant crimson rose. Large, semi-double flowers of velvety scarlet sheen. Vigorous plants. Produces in steady succession throughout the summer.

ANTOINETTE ROIVORE—HT. Flower is pale silvery pink, often shaded lilac, with a touch of yellow at the base. Is of medium size and is fragrant. Erect. Foliage is small and dark. Free blooming in the Spring and Fall. Has beautiful bud and flower. Seventy petals.

KAISERIN AUGUSTE VIKTORIA—HT. Well formed, creamy buds, which develop slowly to snowy white blooms of perfect form, with lemon tint at center; fragrant; moderately vigorous; hardy. Ninety-eight petals.

EASTERN VARIETIES

THESE VARIETIES THRIVE BEST IN LOWER ALTITUDES WITH FAIR TO HEAVY MOISTURE

STUART

The Stuart comes nearer being suited to all sections of the country and all soils than any other variety. A large nut, fills well, medium to heavy bearer. A hardy, fast-growing tree. One of the earliest ripening of all large standard pecans. 48 per cent meat.

SUCCESS

A large and strictly first-class pecan. Strong growing tree, early bearer, thin shell, cracks well and the meats can be taken out in halves. Ripens almost ten days later than Stuart, and is fast gaining in prominence. 52 per cent meat.

DELMAS

A very vigorous growing tree and heavy bearer, with splendid foliage, large nuts. Forty to fifty will make a pound. One of the best for shade purposes. 48 per cent meat.

MONEY MAKER

Originated in Madison Parish, Louisiana; widely disseminated. Size medium; kernel, fairly plump; quantity, fair. Especially suited to planting in the northern range of the area adapted to southern varieties. 46 per cent meat.

SCHLEY

This is an ideal pecan. Large size, very thin shell, fills and sheds out well; fine flavor. Rapid growing tree. Beautiful foliage, and the nuts sell for 5 cents to 10 cents more per pound than other varieties. 60 per cent meat.

MOORE

A very fast growing tree. Medium size nuts, thin shells, good flavor, very productive, and one of the earliest to mature. About 48 per cent meat.

PRESIDENT HERBERT HOOVER—HT. Cross of Sensation and Souvenir de Claudius Pernet. Large, corse-pink, flame, scarlet, and yellow bloom; thick, broad petals; fragrant. This variety has proved itself as one of the best of the newer garden roses for the South.

TALISMAN—HT. Brilliant red and golden buds that open to beautifully shaped blooms of scarlet-orange and golden yellow. Vigorous; tall; blooms constantly. Thrives almost everywhere.

AMERICAN BEAUTY—HT. Large, globular buds and deep crimson, crimson flowers; intensely fragrant; borne freely at frequent intervals on strong stems over a long season. A very popular variety which always wins great admiration for its delightful perfume.

JONKHEER J. L. MOCK—HT. Carmine buds of gigantic size, opening slowly to enormous, deep carmine-pink blooms with inner surface silvery rose. The stems are strong and the bush is vigorous and unusually healthy.

DAME EDITH HELEN—HT. A superb rose of the exhibition type, producing huge, shapely buds and very large, high-centered blooms of clear pink. Many petals fall to the center, and sweetly fragrant. Stems are erect and very stiff.

GOLDEN DAWN—HT. Fully double, deep yellow in bud, occasionally tinged with bronze and opening to fine, richly fragrant, pale lemon-yellow flowers of great size and lasting quality. The plants are dwarf and spreading with dark glossy foliage. Extraordinary for a yellow rose.

MRS. PIERRE S. DUPONT—PH. Well shaped golden yellow flowers resembling those of the lovely old Mme. Butterfly in form. Plant compact and leafy, growing about two and one-half feet high, and blooms with unceasing abundance through the entire season.

SOEUR THERESE—HT. Unusual in the color, the size of the flower, and the vigor of the plant. The color is a rich golden yellow, changing to cadmium-yellow at the edges of the petals; there are small spots or splashes of carmine. Flowers

are above the average in size, and borne on long, strong stems, on plants that are both vigorous and hardy.

SUNBURST—HT. A beautiful, bright yellow rose with a pronounced orange tint at the center; the flowers are well formed, have a delightful, though not strong fragrance, and are borne freely on straight stems. The plant must become thoroughly established before it blooms freely.

IDEAL—(Polyantha.) This rose will give you a great mass of dark scarlet flowers with almost black shadings. The blooms are double, of medium size, and borne in enormous quantities in compact trusses the entire season.

CECILE BRUNNER—(Polyantha.) Also known as "Sweetheart Rose." The blooms, which are small, delicate, and graceful, are light pink with a suffusion of yellow at the base.

GOLDEN SALMON—(Polyantha.) When in full flower this variety makes a gorgeous show, with a multitude of blazing orange blooms, and scores of orange-scarlet buds.

CLIMBING ETOILE DE HOLLANDE—A climbing form of the well known bush variety described above.

CLIMBING TALISMAN—CL. PH. A climbing sport of the bush variety described herein.

PAUL'S SCARLET CLIMBER—HW. Bright scarlet blooms of excellent shape and moderate size, in small trusses. Foliage good. Moderate growth; blooms liberal in early season.

CLIMBING PINK RADIANCE—CL. HT. Climbing form of the well known bush variety described herein.

CLIMBING RED RADIANCE—CL. HT. A strong feet high, and blooms with unceasing abundance through the entire season.

TEXAS CENTENNIAL—(Plant Patent No. 162.) HT. A bright vermilion red, with tone of gold at base of petal, and a light red at the center of bloom, turning to a deep, rich pink as the bloom ages. One of the very best of the new roses.

TWO FAMOUS EARLY RIPENING PEACHES

FAIR'S BEAUTY (Trade Mark No. 274380)—This is a very delicious variety, splendid for eating direct from the tree—none better for canning. Yellow; semi-cling; large to extra large. Ripens June 15th to July 4th. The Fair's Beauty brings tip-top market price because of its high quality and early ripening date. The former owners of Texas Pecan Nursery shipped 143 carloads of Fair's Beauty Peaches this season.

GOLDEN BEAUTY (Trade Mark No. 274836)—This is a large, yellow freestone, with beautiful red cheek. It ripens from June 20th to 25th, three weeks earlier than Elbertas. We have tested this peach for seventeen years, and are thoroughly convinced that it is one of the very best early ripening yellow freestone peaches.

25 Standard Varieties of Peaches

THREE FAMOUS Stubenrauch Peaches

TENA—Large; ripens August 1st to 10th; freestone; yellow and red meat, showing traces of Indian blood; extra good for canning.

FRANK—Clingstone; good flavor; extra good for pickles; ripens August 10th to 15th; very heavy bearer. Mr. Stubenrauch says the Frank has not missed a crop in more than thirty years, and that he believes it is his best all-round peach.

BARBARA—A freestone; ripens August 15th to 30th; a Bell October and Elberta cross; round, large, excellent quality; extra fine for canning.

May Ripeners

MAYFLOWER—A "red-all-over" peach; handsome, splendid quality. Should be in every home orchard; sells readily on the market. Ripens in May.

EARLY WHEELER—Sometimes known as Red Bird Cling. Large fruit, clingstone, beautiful, clear, creamy-white. Ripens last of May and first of June.

June Ripeners

ARP BEAUTY—Yellow, with bright red blush; firm, juicy and excellent peach of unusually good flavor; semi-cling. Ripens June 1st.

MAMIE ROSS—Large, white, cling peach; red cheek. Nice large fruit that markets early. Usually brings a good price. Ripens June 5th to 15th.

BELLE OF GEORGIA—Freestone, white flesh, red cheeked; very large and firm. Excellent flavor. Good shipper. Tree a rapid grower and very productive. Ripens latter part of June.

HALE HAVEN—Freestone, tough skin, very highly colored and well adapted to large commercial plantings. Tree vigorous, hardy; fruit large; good shipper. Ripens about two weeks earlier than Elberta.

EARLY ELBERTA—Freestone, clear yellow with blush; fine grained and sweet. Tree a strong grower; ripens about one week earlier than Elberta.

July Ripeners

J. H. HALE—Large; yellow overlaid with bright carmine; flesh, deep yellow; firm, fine grained, delicious flavor; freestone. Ripens in July.

ELBERTA—Most widely known of all peaches. Very attractive appearance; large; deep yellow, splashed crimson; perfect freestone. Tree vigorous, highly productive. Ripens July 5th to 20th.

ELBERTA CLING—Fruit is large, oblong, pointed, with flesh of yellow, with red cheek. Ripens July 10.

PALLAS—Prolific and regular bearer. Flesh is white, washed with red. Medium size; oblong shape; decidedly pointed. Very sweet. Freestone. Best suited to Gulf Coast section.

CHINESE CLING—Skin creamy with short fuzz. Mottlings of dull red, covering one-third to one-half of surface next to stem. Flesh white with little red at surface next to seed. Tender; very juicy.

August Ripeners

AUGBERT—A superb freestone, similar to Elberta, but in many respects superior. Tree vigorous, prolific; very valuable. Ripens in August.

OLD MIXON CLING—Large, round; white with distinct red blush; flesh, white, red next to seed; firm; excellent quality. Ripens in August.

RED INDIAN—Old-fashioned kind that's so good to eat; splendid for pickling and preserving. Ripens in August.

YELLOW INDIAN—Like the Red Indian, except has yellow flesh.

LEMON CLING—Medium size; yellow meat; clingstone. Extra well suited for sweet pickles. Ripens in August.

HART CLING—White flesh cling that has done so well in Parker County, Texas. A good bearer and shipper. Ripens about August 10th.

September Ripeners

SEPTEMBER ELBERTA—A wonderful, yellow freestone peach that ripens in September. Delicious flavor; ships well.

October Ripeners

STINSON OCTOBER—One of the best late peaches. Large, oblong; white, red cheek; good flavor; clingstone. Ripens in October.

FLOWERING PEACH

A beautiful ornamental tree which in the Spring is covered with immense flowers. It blooms much more profusely than the fruiting peach and the flowers are much larger. See illustration on reverse side.

RED—
PINK and
WHITE

GRAPES Four Exceptionally Good Varieties

MOORE'S EARLY—Very large; early; black; fine quality; good market grape; very healthy; prolific. Ripens last of May or early June.

CONCORD—Best known of all grapes; large, black; suited for table or market. Ripens in July.

NIAGARA—Large; greenish-white; semi-transparent; quality, good; a seedling of Concord; successful over a wide range of territory. Mid-season.

CARMAN—One of the most prolific and popular varieties; splendid for table or for wine, grape juice, preserves, and jelly. Cluster very large, sometimes weighing two pounds; shouldered; very compact. Berries medium size; black with thin bloom. Skin tough, thin, never cracks. Pulp meaty, firm, but tender when fully ripe; splendid quality. Ripens in July.

APRICOTS

MOORPARK—Deep yellow fruit, red blush on sunny side; flesh, bright orange; freestone. Best variety for commercial purposes; fine for canning and drying. Tree vigorous; very prolific. Fruit ripens in June. Adapted to all sections of the Southwest.

EARLY GOLDEN—Medium in size; yellow; rich, juicy, and of a delightful flavor; freestone. Ripens in June.

NOTE: Space does not permit us to list all of the varieties of trees, shrubs and rose bushes we have to offer. We can furnish many plants not described herein, especially in the ornamental line, and invite your inquiry for stock you desire which you do not find listed.

WHY NOT REAP THE BENEFIT OF OUR EXPERIENCE?

Good lateral roots are the life of pecan trees. Experienced growers will tell you our trees have the very best root systems grown on pecan trees. Texas Pecan Nursery has devoted 30 years to the study and development of lateral or side-root systems that would make pecan trees live and grow faster when transplanted, and produce crops earlier. Growers who have planted our trees along with trees from other sources are unanimous in saying that we have developed the best pecan root system grown.

ENGLISH WALNUTS

WILSON'S WONDER—Produces enormous size nuts; hardy; rough shell. Bears very young and heavily. Nuts bring fancy prices.

FRANQUETTE—Large, long, pointed nuts; kernel sweet, rich and full. Regular bearer, as it buds late in the season.

BLACK WALNUTS

THOMAS—Early and prolific bearing; large, thin shell nuts, with kernels in halves. Adapted to nearly all types of soil—will grow in practically all parts of the United States. Trees very hardy.

TEXAS PECAN NURSERY, Inc.

TOMAS G. POLLARD, President

ALLEN POLLARD, Vice-Pres. & Mgr.

TYLER, TEXAS

INSTRUCTIONS FOR HANDLING

With every shipment of trees we send a sheet of instructions giving clear, detailed information for the handling, setting and caring for the trees.

Japan Persimmons

Japan Persimmons are adapted to the South. They thrive in land suited to cotton. The trees are subject to very few diseases. Thrifty and very prolific.

TANE-NASHI—Fruit large to very large; roundish conical; seedless; color, light orange-red, with firm yellow flesh. An excellent shipper. Flesh astringent until soft. Ripens in October.

FUREKA—Medium-size oblate, tomato-shaped fruit. Originated in Texas; withstands rather severe drought conditions and low temperatures in winter. Ripens in November.

YEMON—Large; rather flat; yellow, with orange flesh; seedless; good bearer. The best market variety. Ripens late.
